1.7 Integrals Resulting in Inverse Trigonometric Functions

Learning Objectives

1.7.1 Integrate functions resulting in inverse trigonometric functions

In this section we focus on integrals that result in inverse trigonometric functions. We have worked with these functions before. Recall from **Functions and Graphs (http://cnx.org/content/m53472/latest/)** that trigonometric functions are not one-to-one unless the domains are restricted. When working with inverses of trigonometric functions, we always need to be careful to take these restrictions into account. Also in **Derivatives (http://cnx.org/content/m53494/latest/)**, we developed formulas for derivatives of inverse trigonometric functions. The formulas developed there give rise directly to integration formulas involving inverse trigonometric functions.

Integrals that Result in Inverse Sine Functions

Let us begin this last section of the chapter with the three formulas. Along with these formulas, we use substitution to evaluate the integrals. We prove the formula for the inverse sine integral.

Rule: Integration Formulas Resulting in Inverse Trigonometric Functions1. $\int \frac{du}{\sqrt{a^2 - u^2}} = \sin^{-1}\frac{u}{a} + C$ (1.23)2. $\int \frac{du}{a^2 + u^2} = \frac{1}{a}\tan^{-1}\frac{u}{a} + C$ (1.24)3. $\int \frac{du}{u\sqrt{u^2 - a^2}} = \frac{1}{a}\sec^{-1}\frac{u}{a} + C$ (1.25)

Proof

Let $y = \sin^{-1} \frac{x}{a}$. Then $a \sin y = x$. Now let's use implicit differentiation. We obtain

$$\frac{d}{dx}(a\sin y) = \frac{d}{dx}(x)$$
$$a\cos y \frac{dy}{dx} = 1$$
$$\frac{dy}{dx} = \frac{1}{a\cos y}.$$

For $-\frac{\pi}{2} \le y \le \frac{\pi}{2}$, $\cos y \ge 0$. Thus, applying the Pythagorean identity $\sin^2 y + \cos^2 y = 1$, we have $\cos y = \sqrt{1 = \sin^2 y}$. This gives

$$\frac{1}{a\cos y} = \frac{1}{a\sqrt{1-\sin^2 y}}$$
$$= \frac{1}{\sqrt{a^2 - a^2\sin^2 y}}$$
$$= \frac{1}{\sqrt{a^2 - x^2}}.$$

Then for $-a \le x \le a$, we have

$$\int \frac{1}{\sqrt{a^2 - u^2}} du = \sin^{-1}\left(\frac{u}{a}\right) + C$$

Example 1.49

Evaluating a Definite Integral Using Inverse Trigonometric Functions

Evaluate the definite integral $\int_{0}^{1} \frac{dx}{\sqrt{1-x^{2}}}.$

Solution

We can go directly to the formula for the antiderivative in the rule on integration formulas resulting in inverse trigonometric functions, and then evaluate the definite integral. We have

$$\int_{0}^{1} \frac{dx}{\sqrt{1-x^{2}}} = \sin^{-1} x \Big|_{0}^{1}$$
$$= \sin^{-1} 1 - \sin^{-1} 0$$
$$= \frac{\pi}{2} - 0$$
$$= \frac{\pi}{2}.$$

1.40 Find the antiderivative of $\int \frac{dx}{\sqrt{1-16x^2}}$.

Example 1.50

Finding an Antiderivative Involving an Inverse Trigonometric Function

Evaluate the integral
$$\int \frac{dx}{\sqrt{4-9x^2}}$$

Solution

Substitute u = 3x. Then du = 3dx and we have

$$\int \frac{dx}{\sqrt{4-9x^2}} = \frac{1}{3} \int \frac{du}{\sqrt{4-u^2}}.$$

Applying the formula with a = 2, we obtain

$$\frac{dx}{\sqrt{4-9x^2}} = \frac{1}{3} \int \frac{du}{\sqrt{4-u^2}} \\ = \frac{1}{3} \sin^{-1} \left(\frac{u}{2}\right) + C \\ = \frac{1}{3} \sin^{-1} \left(\frac{3x}{2}\right) + C.$$

Find the indefinite integral using an inverse trigonometric function and substitution for $\int \frac{dx}{\sqrt{9-x^2}}$.

Example 1.51

1.41

Evaluating a Definite Integral

Evaluate the definite integral $\int_{0}^{\sqrt{3}/2} \frac{du}{\sqrt{1-u^2}}.$

Solution

The format of the problem matches the inverse sine formula. Thus,

$$\int_{0}^{\sqrt{3}/2} \frac{du}{\sqrt{1-u^2}} = \sin^{-1} u \Big|_{0}^{\sqrt{3}/2}$$
$$= \left[\sin^{-1} \left(\frac{\sqrt{3}}{2} \right) \right] - \left[\sin^{-1} (0) \right]$$
$$= \frac{\pi}{3}.$$

Integrals Resulting in Other Inverse Trigonometric Functions

There are six inverse trigonometric functions. However, only three integration formulas are noted in the rule on integration formulas resulting in inverse trigonometric functions because the remaining three are negative versions of the ones we use. The only difference is whether the integrand is positive or negative. Rather than memorizing three more formulas, if the integrand is negative, simply factor out -1 and evaluate the integral using one of the formulas already provided. To close this section, we examine one more formula: the integral resulting in the inverse tangent function.

Example 1.52

Finding an Antiderivative Involving the Inverse Tangent Function

Find an antiderivative of $\int \frac{1}{1+4x^2} dx$.

Solution

Comparing this problem with the formulas stated in the rule on integration formulas resulting in inverse trigonometric functions, the integrand looks similar to the formula for $\tan^{-1} u + C$. So we use substitution, letting u = 2x, then du = 2dx and 1/2du = dx. Then, we have

$$\frac{1}{2} \int \frac{1}{1+u^2} du = \frac{1}{2} \tan^{-1} u + C = \frac{1}{2} \tan^{-1} (2x) + C.$$

Use substitution to find the antiderivative of $\int \frac{dx}{25 + 4x^2}$.

Example 1.53

1.42

Applying the Integration Formulas

Find the antiderivative of
$$\int \frac{1}{9+x^2} dx$$
.

Solution

1.43

Apply the formula with a = 3. Then,

$$\int \frac{dx}{9+x^2} = \frac{1}{3} \tan^{-1}\left(\frac{x}{3}\right) + C$$

Find the antiderivative of
$$\int \frac{dx}{16 + x^2}$$

Example 1.54

Evaluating a Definite Integral

Evaluate the definite integral $\int_{\sqrt{3}/3}^{\sqrt{3}} \frac{dx}{1+x^2}.$

Solution

Use the formula for the inverse tangent. We have

$$\int_{\sqrt{3}/3}^{\sqrt{3}} \frac{dx}{1+x^2} = \tan^{-1}x\Big|_{\sqrt{3}/3}^{\sqrt{3}}$$
$$= \left[\tan^{-1}(\sqrt{3})\right] - \left[\tan^{-1}\left(\frac{\sqrt{3}}{3}\right)\right]$$
$$= \frac{\pi}{6}.$$

Evaluate the definite integral
$$\int_{0}^{2} \frac{dx}{4+x^{2}}$$
.

1.7 EXERCISES

In the following exercises, evaluate each integral in terms of an inverse trigonometric function.

391.
$$\int_{0}^{\sqrt{3}/2} \frac{dx}{\sqrt{1-x^2}}$$

$$392. \quad \int_{-1/2}^{1/2} \frac{dx}{\sqrt{1-x^2}}$$

$$393. \quad \int_{\sqrt{3}}^{1} \frac{dx}{\sqrt{1+x^2}}$$

394.
$$\int_{1/\sqrt{3}}^{\sqrt{3}} \frac{dx}{1+x^2}$$

395.
$$\int_{-1}^{\sqrt{2}} \frac{dx}{|x|\sqrt{x^2 - 1}}$$

396.
$$\int_{-1}^{2/\sqrt{3}} \frac{dx}{|x|\sqrt{x^2 - 1}}$$

In the following exercises, find each indefinite integral, using appropriate substitutions.

$$397. \quad \int \frac{dx}{\sqrt{9-x^2}}$$

 $398. \quad \int \frac{dx}{\sqrt{1 - 16x^2}}$

$$399. \quad \int \frac{dx}{9+x^2}$$

$$400. \quad \int \frac{dx}{25 + 16x^2}$$

$$401. \quad \int \frac{dx}{|x|\sqrt{x^2 - 9}}$$

$$402. \quad \int \frac{dx}{|x|\sqrt{4x^2 - 16}}$$

403. Explain the relationship $-\cos^{-1}t + C = \int \frac{dt}{\sqrt{1 - t^2}} = \sin^{-1}t + C$. Is it true, in general, that $\cos^{-1}t = -\sin^{-1}t$?

404. Explain the relationship
$$\sec^{-1} t + C = \int \frac{dt}{|t|\sqrt{t^2 - 1}} = -\csc^{-1} t + C$$
. Is it true, in general, that $\sec^{-1} t = -\csc^{-1} t$?

405. Explain what is wrong with the following integral: $\int_{1}^{2} \frac{dt}{\sqrt{1-t^{2}}}.$

406. Explain what is wrong with the following integral: $\int_{-\infty}^{1} dt$

$$\int \frac{dt}{|t|\sqrt{t^2 - 1}}.$$

In the following exercises, solve for the antiderivative $\int f$ of f with C = 0, then use a calculator to graph f and the antiderivative over the given interval [a, b]. Identify a value of C such that adding C to the antiderivative recovers the definite integral $F(x) = \int_{a}^{x} f(t) dt$.

407. **[T]**
$$\int \frac{1}{\sqrt{9 - x^2}} dx$$
 over [-3, 3]
408. **[T]** $\int \frac{9}{9 + x^2} dx$ over [-6, 6]
409. **[T]** $\int \frac{\cos x}{4 + \sin^2 x} dx$ over [-6, 6]
410. **[T]** $\int \frac{e^x}{1 + e^{2x}} dx$ over [-6, 6]

In the following exercises, compute the antiderivative using appropriate substitutions.

411.
$$\int \frac{\sin^{-1} t dt}{\sqrt{1 - t^2}}$$
412.
$$\int \frac{dt}{\sin^{-1} t \sqrt{1 - t^2}}$$

Chapter 1 | Integration

413.
$$\int \frac{\tan^{-1}(2t)}{1+4t^2} dt$$

414.
$$\int \frac{t \tan^{-1}(t^2)}{1+t^4} dt$$

415.
$$\int \frac{\sec^{-1}\left(\frac{t}{2}\right)}{|t|\sqrt{t^2 - 4}} dt$$

416.
$$\int \frac{t \sec^{-1}(t^2)}{t^2 \sqrt{t^4 - 1}} dt$$

In the following exercises, use a calculator to graph the antiderivative $\int f$ with C = 0 over the given interval [a, b]. Approximate a value of *C*, if possible, such that adding *C* to the antiderivative gives the same value as the definite integral $F(x) = \int_{a}^{x} f(t) dt$.

417. **[T]**
$$\int \frac{1}{x\sqrt[3]{x^2 - 4}} dx \text{ over } [2, 6]$$

418. **[T]**
$$\int \frac{1}{(2x + 2)\sqrt{x}} dx \text{ over } [0, 6]$$

419. **[T]**
$$\int \frac{(\sin x + x \cos x)}{1 + x^2 \sin^2 x} dx \text{ over } [-6, 6]$$

420. [T]
$$\int \frac{2e^{-2x}}{\sqrt{1-e^{-4x}}} dx$$
 over [0, 2]

421. **[T]**
$$\int \frac{1}{x + x \ln^2 x}$$
 over [0, 2]
422. **[T]** $\int \frac{\sin^{-1} x}{\sqrt{1 - x^2}}$ over [-1, 1]

In the following exercises, compute each integral using appropriate substitutions.

423.
$$\int \frac{e^x}{\sqrt{1 - e^{2t}}} dt$$

424.
$$\int \frac{e^t}{1+e^{2t}} dt$$

$$425. \quad \int \frac{dt}{t\sqrt{1-\ln^2 t}}$$

426.
$$\int \frac{dt}{t(1+\ln^2 t)}$$
427.
$$\int \frac{\cos^{-1}(2t)}{\sqrt{1-4t^2}} dt$$
428.
$$\int \frac{e^t \cos^{-1}(e^t)}{\sqrt{1-e^{2t}}} dt$$

In the following exercises, compute each definite integral.

$$429. \quad \int_{0}^{1/2} \frac{\tan(\sin^{-1}t)}{\sqrt{1-t^{2}}} dt$$

$$430. \quad \int_{1/4}^{1/2} \frac{\tan(\cos^{-1}t)}{\sqrt{1-t^{2}}} dt$$

$$431. \quad \int_{0}^{1/2} \frac{\sin(\tan^{-1}t)}{1+t^{2}} dt$$

$$432. \quad \int_{0}^{1/2} \frac{\cos(\tan^{-1}t)}{1+t^{2}} dt$$

433. For A > 0, compute $I(A) = \int_{-A}^{A} \frac{dt}{1+t^2}$ and evaluate $\lim_{a \to \infty} I(A)$, the area under the graph of $\frac{1}{1+t^2}$ on $[-\infty, \infty]$.

434. For
$$1 < B < \infty$$
, compute $I(B) = \int_{1}^{B} \frac{dt}{t\sqrt{t^2 - 1}}$ and evaluate $\lim_{B \to \infty} I(B)$, the area under the graph of $\frac{1}{t\sqrt{t^2 - 1}}$ over $[1, \infty)$.

435. Use the substitution $u = \sqrt{2} \cot x$ and the identity $1 + \cot^2 x = \csc^2 x$ to evaluate $\int \frac{dx}{1 + \cos^2 x}$. (*Hint:* Multiply the top and bottom of the integrand by $\csc^2 x$.)

This OpenStax book is available for free at http://cnx.org/content/col11965/1.2

436. **[T]** Approximate the points at which the graphs of $f(x) = 2x^2 - 1$ and $g(x) = (1 + 4x^2)^{-3/2}$ intersect, and approximate the area between their graphs accurate to three decimal places.

437. 47. **[T]** Approximate the points at which the graphs of $f(x) = x^2 - 1$ and $f(x) = x^2 - 1$ intersect, and approximate the area between their graphs accurate to three decimal places.

438. Use the following graph to prove that $\int_{0}^{x} \sqrt{1-t^{2}} dt = \frac{1}{2}x\sqrt{1-x^{2}} + \frac{1}{2}\sin^{-1}x.$
